· **Recommended filter device for short term use: Filter P3**

· **Protection of hands:**

Protective gloves

*according to EN 374*

*To avoid skin problems reduce the wearing of gloves to the required minimum.*

*Only use chemical-protective gloves with CE-labelling of category III.*

*Sensibilisation by the components in the glove materials is possible.*

*Check the permeability prior to each renewed use of the glove.*

*The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.*

*Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation*

*Prior to working with gloves the rubbing in with tanniferous skin-protecting agents for the avoidance of skin softening due to perspiration is recommended.*

· **Material of gloves**

*The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.*

· **Penetration time of glove material**

*The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.*

*The determined penetration times according to EN 374 part III are not performed under practical conditions.*

*Therefore a maximum wearing time, which corresponds to 50% of the penetration time, is recommended.*

*For the mixture of chemicals mentioned below the penetration time has to be at least 480 minutes (Permeation according to EN 374 Part 3: Level 3).*

*Value for the permeation: Level  $\leq 3$*

· **Not suitable are gloves made of the following materials:**

*Leather gloves*

*Strong material gloves*

· **Eye protection:**

Tightly sealed goggles

*according to EN 166*

· **Body protection: Protective work clothing**
