

Veneering ceramic

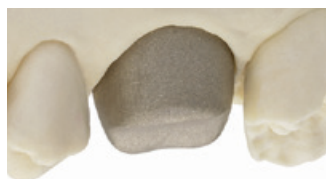

This new kind of leucite glass ceramic makes layering even easier: **Opaquer + ceramic material + stain = brilliant, reproducible single crowns and bridges.**

INSPIRATIONeasy is the easiest solution for the veneering of precious and non-precious frameworks with a CTE of 13.8 to 14.8 x 10⁻⁶K⁻¹ (25 – 500 °C). Visually as well as technically, this system leads directly to the desired result. And “directly” means: no opaquer dentin, no dentin, no enamel material, just ceramic material. The same material from the cervical margin up to the enamel material – it’s that easy! Even with multiple layers or corrections, optical variations are completely out of the question.

The big advantage of this technology lies in the simple, natural reproduction of the individual tooth form. Only if you like the shape of the tooth, do you begin with the finish. “Glaze finish” and “body shade” plus “enamel stain” are applied and undergo 1 or 2 firing cycles, depending on tooth shade. And your expert-looking dental prosthesis is ready. The new glaze effects of the shade body colours enable you to add creative touches to dental work made with INSPIRATION as well as INSPIRATIONpress.
